You can now search for these products based on timeframe, or you can search the latest catalog to see what's new.

If you're having trouble finding what you're looking for please contact Strem to request a custom synthesis or make a new product suggestion.

Strem Chemicals UK is working safely during coronavirus pandemic

Scientists around the world have been working tirelessly to develop innovative approaches to not only treat COVID-19 but stop its spread. The virus' ability to linger and travel outside the body in respiratory droplets makes COVID-19 highly contagious.

We continue to operate in COVID - secure environment in line with the UK Government guideline.

As with most businesses when COVID struck in March and orders stopped we took the decision to furlough staff and minimise costs.

Thanks to the government help and return of industrial customer sales the business has managed to bring staff back and has had it's best year to date.

Introducing our new Business Manager

University sales are still down but improving and due to this we have now added technical/business support with the addition of Robert our new business manager aiming to strengthen sales in both areas.

Roberts focus will be on supporting new business development opportunities and extending existing partnerships. Robert with his chemistry background brings varied experience to Strem Chemicals UK including Logistics and Customer Relationship Management. Robert will be on hand to help with any queries you may have.
